## HDFS inspiration

### • Google File System

- Sanjay Ghemawat, Howard Gobioff, and Shun-Tak Leung. 2003. The Google file system. In Proceedings of the nineteenth ACM symposium on Operating systems principles (SOSP '03). ACM, New York, NY, USA, 29-43.

#### The Google File System

Sanjay Ghemawat, Howard Gobioff, and Shun-Tak Leung  
Google

#### ABSTRACT

We have designed and implemented the Google File System, a scalable distributed file system for large distributed data-intensive applications. It provides both tolerance while running to component crashes, and tolerance to hardware failures. Google File System has been deployed to manage the data of our application workloads and has demonstrated excellent performance and availability. This paper describes the design and implementation of the Google File System, and discusses the system's architecture. The file system has been successfully used to manage data in a wide variety of applications.

#### 1. INTRODUCTION

We have designed and implemented the Google File System (GFS) to meet the rapidly growing demands of Google's data processing needs. GFS shares many of the same goals as previous distributed file systems such as performance, availability, reliability, and scalability. However, no single feature has been given by the introduction of our application workloads and technological environment. We have implemented a distributed file system that supports scaling across many nodes in the system. The file system consists of hundreds of nodes, thousands of storage machines, and thousands of storage machines.

## HDFS overview

- Good for streaming access to large files, reliability, scale
- Not good for random access, small files
- Blocks of data 64Mb in size (configurable)
- Each block can be replicated across multiple data nodes for High Availability (HA)

 © Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

## HDFS Usage

- Spotify has 1600+ nodes, storing 60+ petabytes of data
  - <https://www.usenix.org/system/files/conference/fast17/fast17-niazi.pdf>
- One of the Facebook's largest clusters (based on HDFS) holds more than 100 PB of data, processing more than 60,000 Hive queries a day
  - <https://www.facebook.com/notes/facebook-engineering/under-the-hood-scheduling-mapreduce-jobs-more-efficiently-with-corona/>

 © Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

## HopFS

- HopFS is a drop-in replacement for HDFS, based on HDFS v2.0.4.

Figure 1: System architecture for HDFS and HopFS. For high availability, HDFS requires an Active NameNode (ANN), at least one Standby NameNode (SNN), at least three Journal Nodes for quorum-based replication of the write ahead log of metadata changes, and at least three ZooKeeper instances for quorum based coordination. HopFS supports multiple stateless namenodes that access the meta-data stored in NDB database nodes.

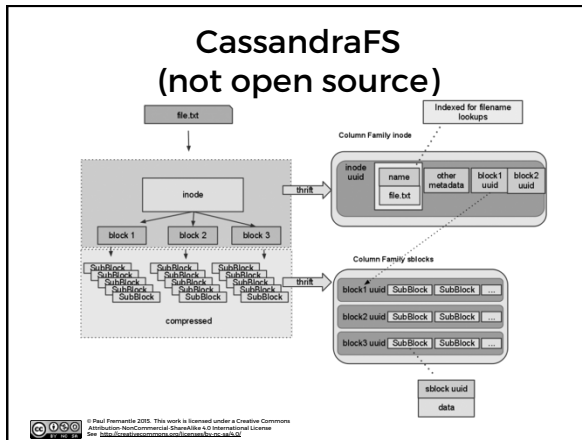

Figure 6: HopFS and HDFS throughput for Spotify workload.

---

---

## Amazon S3

- Simple Storage Service
- Unlimited storage of files
  - Up to 5 terabytes each
  - Stored in named “buckets”
  - Accessible via AWS APIs or HTTP
  - Authenticated or Public

© Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

---

---

---

---

---

---

---

---

## Spark packages

- A wide set of plugins
  - Currently 148 community donated plugins
- Data connectors
  - Cassandra, Couchbase, Mongo, CSV, etc
- Machine Learning, Neural networks
- Streaming
- etc

© Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

---

---

---

---

---

---

---

---

## Using Spark Packages

Automatic download from the web:

```
bin/spark-shell
--packages com.databricks:spark-csv_2.11:1.2.0
```

 © Paul Fremont 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

---

---

---

---

---

---

---

## Locality

- Spark understands the locality of data:
  - Already in memory
  - HDFS location
  - Cassandra location

 © Paul Fremont 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

---

---

---

---

---

---

---

## Spark Extras

 © Paul Fremont 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

---

---

---

---

---

---

---

## Spark Extras

- **Spark Streaming**
  - Realtime analysis in Spark
- **Spark MLLib**
  - Like Mahout – Machine learning in Spark
- **GraphX**
  - Graph processing in Spark
- **SparkR**
  - R statistical analysis on Spark

 © Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

---

---

---

---

---

---

---

## Spark MLLib

- Simple stats and correlation testing
- Classification and regression
- Collaborative Filtering
  - Alternating Least Squares
- Clustering
  - k-means, etc
- Frequent Pattern Mining
- Plus more

 © Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

---

---

---

---

---

---

---

## MLlib example

```
from pyspark.mllib.fpm import FPBGrowth

data = sc.textFile("data/mllib/sample_fpgrowth.txt")

transactions = data.map(lambda line: line.strip().split(' '))

model = FPBGrowth.train(transactions, minSupport=0.2,
                        numPartitions=10)

result = model.freqItemsets().collect()
for fi in result:
    print(fi)
```

**R** 

- **R is an open source system for statistics and graphics**
  - Based on the S language from AT&T Bell Labs
- **Supports a wide variety of statistical techniques and graphing tools**
- **An extensible set of packages that provide extra functions via CRAN**
  - The Comprehensive R Archive Network

© Paul Fremont 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

---

---

---

---

---

---

---

---

**SparkR**

- **A lightweight approach to use Spark from within R**
- **Also works with MLlib for machine learning**
- **Allows complex statistical analysis to be done on a Spark cluster**

© Paul Fremont 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

## Apache Avro

- A compact data storage and transmission system
  - Uses schemas of data to ensure it can be read by the receiver
  - Supports dynamic typing
- Used by RPC or data collection systems
  - Fast binary protocols
- Also supports storage
  - Hence used by many Big Data apps including Hadoop and Spark

 © Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

## Apache Parquet

- Apache Parquet is a columnar data storage model
  - Works with Hadoop, Spark and many others
  - Efficient storage of data
  - Based on another Google system called Dremel

 © Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

## Cluster management systems for Big Data

- YARN
  - Part of Hadoop but significantly rebuilt since Hadoop 1
- Mesos
  - Popular Apache project
  - Built to be a resource manager for a complete datacenter
    - Supports many workloads (e.g. Docker as well as Spark)

 © Paul Fremantle 2015. This work is licensed under a Creative Commons Attribution-NonCommercial-ShareAlike 4.0 International License. See <https://creativecommons.org/licenses/by-nc-sa/4.0/>

## What is YARN?

- **YARN is the system that runs your code on multiple nodes**
- Hadoop 2.0 replacement for the cluster manager
  - Basically a model to distribute and manage workloads
  - Not just MapReduce but supports other workloads

## EC2 / AWS main functions

- EC2 (Elastic Compute Cloud)
  - Instances
    - Servers of various sizes
  - AMIs (Amazon Machine Images)
    - Server images
  - Elastic Block Storage (EBS)
    - Virtualized Hard drives
  - VPC (Virtual Private Cloud)
    - Secure network space
- S3 (Simple Storage Solution)
  - “Buckets” of data
  - Longer term storage of data

---

## Flintrock Launching a cluster

```
flintrock launch test-cluster \
  --num-slaves 1 \
  --spark-version 2.2.0 \
  --ec2-key-name key_name \
  --ec2-identity-file /path/to/key.pem \
  --ec2-ami ami-a4c7edb2 \
  --ec2-user ec2-user
```

---

---

---

---

---

---

---

---

## Other things you can do

```
flintrock destroy test-cluster
flintrock login test-cluster
flintrock describe test-cluster
flintrock add-slaves test-cluster
  --num-slaves 2
flintrock remove-slaves test-cluster
  --num-slaves 1
flintrock run-command test-cluster
  'sudo yum install -y package'
flintrock copy-file test-cluster
  /local/path /remote/path
```
